

Air Filtration System Travel Policy

YEL.116

Yelloway Coaches Ltd takes great pride in ensuring we provide the best possible service to all our passengers.

With this in mind we strive to have a current and appropriate policy in place when it comes to the use of the air conditioning units and air circulation on board our vehicles, especially whilst in the midst of the Covid-19 pandemic when customers and staff are travelling with us.

This policy has been designed and implemented to endeavour we provide the best possible customer care and experience. Our vehicles have the latest technology fitted on the air conditioning systems to ensure we can all still travel in comfort. The additional filter fitted eliminates viruses including SARS-CoV2 by sterilising the air while passengers are on board.

The [ECO3 Air Purifier](#) is supplied by [Hispacold](#), a world leader on the development of sustainable air conditioning solutions for passenger transport.

As a market leading transport provider Yelloway Coaches Ltd were one of the first coach operators to have these systems fitted to our vehicles in the North West by our supplier Airconco Ltd.

All our drivers have been trained in the operation of the equipment to ensure the customer's journey is as comfortable as possible.
